**TOTAL
SCIENCE**

TOTAL SCIENCE™

Total Science is a company dedicated to R & D, manufacturing, marketing and distribution of new technologies servicing the hygienic world. At Total Science every effort is aimed towards long lasting, ecological, and safer solutions with the ultimate goal to provide new ways of incorporating antiseptic products in commonly used objects.

All of our solutions must respect the highest standards in safety, efficiency, innovation, accessibility and be respectful of the environment. Accessibility is important to us and, we want the population in need of our innovations to have access to them without waiting, so the equivalent of 1% of our profit goes towards the donation and distribution of products made with our additives.

You will find our logo  with the name Total™ on every quality

products that incorporates our antiseptic additives in order to increase their hygienic performances.

Total Science is your partner for life.

TOTAL SCIENCE™

Total™ our focus product, is a liquid aqueous antiseptic solution that can be easily added to many existing manufacturing processes.

In fact, because of its very high stability and compatibility, Total™ can be integrated to many existing products.

Total™ shows absolutely no known carcinogenic characteristic and no skin reactivity. Total™ is a safe product to be use by everyone, everyday.

Total™ is offering the largest and widest spectrum of eliminating bacteria's, viruses, fungi's and dust mites. All of this in a record time of less than 1 minute.

Also due to its biocide effect, Total™ is very effective at removing unwanted odors.

Our product range includes many different concentrations and packaging option to best fit your needs. Most of our products come in a concentrated liquid solution that can be diluted at the manufacturing site.

We also have a liquid solution ready to use for surface disinfection. It comes in 250 ml format with index sprayer.

Please contact us for more details.

Medical applications:

In the medical field, Total™ is the natural and safe answer. The medical community has been looking for a comparable solution for many years.

Fast Acting – Complete spectrum of disinfection – 100% safe

The two main categories emerge:

Bandages:

By its complete and ultra fast sterilization action, Total™ offers a much need comfort and relief to the ones that need it the most. Indeed as the bandages are remaining in their optimal state for a longer time, the need for change is less frequent and leaves more time for recuperating.

Another aspect of this amazing performance, cost. Since there is more time between changes, human resources can be applied to other sectors or simply reduce.

Sterilization:

Many applications in sterilization are possible and much more efficient with Total™. Because of its fast acting biocide action and its complete respect of the environment Total™ is rapidly becoming the number one choice of health and safety departments.

TOTAL SCIENCE™

Public hygiene:

Total™ is a long awaited product for the cleaning industry; in fact Total™ can be easily mixed with other existing cleaning products from all categories household, commercial or industrial. There is no logical reason not to use it as an additive to existing solutions or new solution to be created.

Also Total™ can be use as a stand alone product, to be sprayed on surfaces, every where.

Many areas are ready for Total™ like agriculture, schools, day cares, public transportation systems, restaurants, retail stores, food stores, commercial laundries, etc.

The **textile industry** is the most receptive to Total™ so far.

Total™ can be integrated vertically or horizontally in the manufacturing process. It can be applied directly on the string or we can supply the maker of the finished product. Total™ can resist up to 100 washes, so it is very economic to use with a great reward in consumer loyalty.

A big part of the textile market is the non woven like filters, pillows, insulation material.

Also Total™ can become an important source of revenue as it can be sold in a liquid form, ready to use spray, to be applied on the garment as needed by the consumer.

TOTAL SCIENCE™

Paper

Total™ can be applied on paper at any stage of the manufacturing process.

From disposable towels, diapers, vacuum bags, agendas, cards, napkins, hand towels, hygienic paper, etc.

With paper the possibilities are endless.

Plastics:

The area of plastic is still new for us but we are making promising progress in the integration process. At this stage we can apply it to the final stage of manufacturing like a varnish.

Just imagine the endless possibilities... Toys, telephones, handles, keyboards, kitchen appliances, bathrooms, etc.

TOTAL SCIENCE™

Patent, certifications, tests and trade marks:

Having production site based in Europe, America and Asia, Total Science™ is where you and your clients are. In fact Total Science™ is a vertically integrated company from research and development, marketing, distribution, private label and direct consumer sales.

Total™ is obtaining its own patent and is now protected in over 140 countries, not only the solution itself but also the mixing procedure and the different applications now and future. This would allow us to stop any illicit manufacturing site but also stop its distribution at the border of any registered state.

Total Science™ is obtaining all needed certification in all countries where the product is sold.

Total Science™ has done many test trough certified independent laboratories from around the world and his willing to share that information with its clients.

Total™, its logo and its color scheme are a registered trade mark and are protected in more than 60 countries.

TOTAL SCIENCE™

Humanitarian Projects

Like we have mentioned in this introduction, we are giving 1% of our profits to population in need of products made with Total™. We believe that all people have a right to have access to the best available technologies for their health and safety.
